Software Engineering undergraduate at Universitas Gadjah Mada. Frontend and mobile developer who has shipped products for event committees, an alumni association, and a government agency, mostly with React, Next.js, and React Native. Open to software engineering internships in web or mobile development, available immediately.

EDUCATION

Universitas Gadjah Mada - Yogyakarta

Aug 2024 – Expected Aug 2028

Applied Bachelor (D4), Software Engineering | GPA: 3.85 / 4.00

EXPERIENCE

Freelance Web Developer - Yogyakarta

Feb 2026 – Aug 2026

Full-Stack Developer

- **UGM Cup 2026:** Built a live bracket and score system (Next.js, Supabase, deployed on AWS EC2) for 300+ participants, replacing scores that were only updated at the end of each match day.
- **Farmasi Cup 2026:** Built a responsive landing and event info site (Next.js, TailwindCSS) from the designer's Figma files.
- **Civil in Action 2026:** Built the competition registration flow (Next.js, Firebase) so sign-ups came in through the site and organizers tracked every submission from one dashboard.

KATY SMAN 1 Yogyakarta

Feb 2025 – Nov 2025

Alumni association of SMA Negeri 1 Yogyakarta.

Mobile Developer (Freelance)

- Built a cross-platform mobile app (Expo, React Native, NativeWind) with a simplified UI for older alumni, replacing scattered WhatsApp groups that many alumni were never added to.
- Built an alumni map (Google Maps API) to find alumni in a given city with their contact details.

PROJECTS

Waste Water & Construction Services Agency (Dinas PUP-ESDM DIY)

Feb 2026 – Jun 2026

Coursework project with a real government client; 4-person team (PM, UI/UX, FE, BE).

Frontend Developer

- Worked in the agency's legacy Laravel codebase to add a web map (Leaflet, Blade) of manhole and pipeline assets, so staff could check asset condition without going to the site first.
- Replaced phone-call complaint reporting with a web form plus an admin view for repair status; the work was merged into the agency's repository.

Company Profile Site - KAHASOLUSI

August 2025 – November 2025

Coursework project with a software house client.

Frontend Developer

- Shipped the site in SvelteKit, a stack I picked up during the project because the client asked for it.

Ground Control Station for UAVs - GAMAFORCE UGM

Dec 2024 – Present

Web-based ground control station (React, Express, MAVLink via mavp2p/Redis).

Software Programmer

- Joined an existing codebase and built its backend analytics services, heatmap generation, image segmentation, and orthomosaic stitching (Python, Flask).
- Migrated mission logs from offline files to a cloud database (Supabase), so past flight telemetry is queryable instead of stuck on one machine.

TB Screening Mobile App - GDGoC UGM Hackathon

Apr 2026 – Jul 2026

Full-Stack Developer - Top 5 Finalist

- Built a mobile app (Flutter) for early tuberculosis screening from cough audio, calling Google's HeAR model hosted on Hugging Face to classify respiratory sounds.

ACHIEVEMENTS

- **2nd Place, Monad Blitz Hackathon 2026** - VISTA Protocol, a dApp paying users for watching ads on partnered social platforms. Wrote and deployed the smart contracts and reward flow (Solidity, Monad testnet).
- **National Funding Recipient, PKM-KC 2026** (Ministry of Education) - non-invasive hemoglobin screening device for anemia detection in pregnant women, combining a PPG sensor with an ExtraTrees model.

SKILLS

Languages: JavaScript/TypeScript, Python, PHP, Solidity

Frontend: React, Next.js, SvelteKit, TailwindCSS, HTML/CSS

Mobile: React Native (Expo), Flutter, NativeWind

Backend: Express.js, FastAPI, Laravel (Blade), Flask

Database & Cloud: PostgreSQL, Supabase, Firebase, AWS

Tools: Git, Docker, Figma, Linux

ORGANIZATIONAL

GAMAFORCE UGM (2024–present) · GDGoC UGM, Hacker Division (2025–2026) · UGM Blockchain Club (2026–present)
